# LabVIEW Services
by Emerging Technologies, LLC.

Experienced

With over twenty years in the business of software development, applying innovative methods and techniques, Emerging Technologies, LLC. has the experience and the resources to develop solutions that improve efficiency, ease of use, and provide mistake resistant applications.

Certified

Use of the latest software and driver versions, state-of-the-art planning and development procedures puts Emerging Technologies above the rest. We have LabVIEW Certified resources that use the highest practical development skills resulting in technically sound solutions with cutting edge technology.

Customer Focused

Emerging Technologies offers detailed order status throughout the project, such as weekly status updates, up to date schedule information, and anticipated completion date. Our detailed design review process allows for customer approval prior to the start of any project.

Emerging Technologies is your full-service resource for custom LabVIEW development. We offer solutions using the most current and state-of-the-art versions of LabVIEW and drivers. Our team of certified programmers will apply expert skill and knowledge in developing a wide spectrum of LabVIEW specific applications.

Since its inception in 1999, Emerging Technologies, LLC. has been developing and deploying custom test applications. Over the years many applications have been completed using different versions of LabVIEW, through adaptation to our customer's needs and requirements.

At Emerging Technologies, we do not limit our skill set to only new and custom applications, but also have proficiency in updating and upgrading existing systems to the latest versions of software, as well as driver and sub program development. In addition to software development and upgrades, the Emerging Technologies team is versed in troubleshooting issues with existing applications including field hardware and related devices, networks and programs.

User and configurations interface, sequence development, specific purpose VIs, results and data management, I/O device interface, program and subprogram interface

are just some of the many routine tasks accomplished by the Emerging Technologies development team.

Other typical services offered by the Emerging Technologies team include test, Data Acquisition (DAQ) and information tracking applications. We are also able to provide experience in mathematical and graphical presentation applications.

Knowledge of a wide variety of languages allows us to interface pre-existing software with LabVIEW or start your application from scratch, making Emerging Technologies the right choice for any application.

LabVIEW Development Upgrade & Troubleshooting

Application Development Concept through Deployment

Effective Device and Third-Party Interface Development

Graphical User Interface, DAQ and Mathematical Solutions

Application Maintenance, Update and Upgrades

Data Management Tracking and Reporting

Reduce Time to Deployment with Certified Resources
